

Honeywell Home

T-Series Smart Thermostat (T9 and T10 Pro)

According to recent research from Resideo, maker of Honeywell Home™ branded products, approximately 66 percent of homeowners say they have one or more “uncomfortable” room(s) – like a bedroom over the garage – that gets too hot in the summer and too cold in the winter. Inevitably, certain rooms in the home are subject to temperature shifts, leaving the thermostat with lots of variables to balance. Consumers are craving smarter comfort both during the day and at night. In fact, according to Parks Associates, 56 percent of consumers believe that an uncomfortable room temperature impacts their sleep quality.

Resideo’s newest Honeywell Home T-Series Smart Thermostats, the [T9](#) and T10 Pro, feature smart room sensors, which help balance hot and cold spots in the home and take individualized comfort to the next level. Homeowners can place the wireless smart room sensors in any room they want to control. The smart room sensors extend the reach of the thermostat by monitoring temperature, humidity and motion in other areas of the home, and offer:

- **Room Occupancy Detection** – Smart sensors detect when a room becomes occupied and automatically adjusts the temperature of the smart thermostat based on preferences and schedule. For example, keep the kids comfortable after school whether they’re in the kitchen doing homework or in the basement playing video games.
- **Whole Home Control** – Homeowners can control specific living areas during the day and bedrooms at night for comfort where and when it’s needed. Connect up to 20 smart room sensors to one thermostat via a proprietary, 900 MHz radio.
- **Long Range** – The smart sensors feature an unmatched range of 200 feet.
- **Intelligent Room Control** – Parents aren’t forced to pick which child sleeps comfortably at night or pick one nominated room over another. The smart thermostat helps balance the chosen rooms and deliver a desired temperature to keep everyone happy.

Homeowners can enjoy energy savings when they are away and comfort when home by adjusting the thermostat from anywhere – or let the home react automatically with geofencing. The new T-Series Smart Thermostats will be available in North America in Spring 2019 at all major retailers, professional contractors and HoneywellHome.com.

A Day in the Life with the Honeywell Home T-Series Smart Thermostat

6 a.m. Just as your family starts waking up, the schedule set on your T-Series Smart Thermostat begins to warm up the bedrooms, helping your family gently awaken to the right temperature.

7 a.m. As bedrooms are left, the smart room sensors take notice. They can help ensure comfort follows your family’s movements around the home as they get ready for the day and head out the door.

8 a.m. As everyone leaves the home, geo-fencing control can enable the heating/cooling system to know when the home is empty and start conserving energy.

2 p.m. While you go about your day, you'll be able to check in on your home at any time. If it gets too hot or too cold, you'll be alerted so you can take action.

5 p.m. The T-Series Smart Thermostat's geofencing knows when you're coming home and it starts making the house comfortable so you don't even have to think about it.

10 p.m. As everyone settles in for the night, the smart thermostat shifts its focus to the rooms you've chosen, and ensures everyone is kept comfortable throughout the night.

Sleep and Live Smarter

Homeowners can control any room and achieve the right temperature when and where it's wanted with the T-Series via:

- Effortless heating and cooling. The sensors follow motion throughout the house and can automatically start to control rooms when they become occupied.
- Smart Integrations. Consumers can use the smart thermostats as part of every popular smart home ecosystem and assistant, including Amazon Alexa and Google Assistant, among others. For example, consumers can control via voice commands, such as, "Hey Google, check the temperature of the basement," or "Alexa, set the living room to 72 degrees until 8 p.m."
- Temperature and Humidity sensors. The T9 Smart Thermostat offers an accurate snapshot of a home's current temperature, humidity level, room priorities and local weather via an intuitive color touchscreen display. The T10 Pro measures the same information, but since it's a professionally installed solution it can also control the humidity or ventilation in specific rooms.

The Honeywell Home Mobile App

Designed for Apple and Android devices, the Honeywell Home app allows for:

- Control the Honeywell Home ecosystem. Change the home's temperature, view indoor cameras and keep an eye on the Water Leak and Freeze Detector.
- Customizable temperature and humidity alerts. Being in the know immediately is important, especially if something may be wrong – like when temperatures are so low that a pipe could burst, or a child's room is getting warmer than preferred.
- Geofencing technology. Based on the location of a mobile device and the schedule, consumers get comfort when they are home and savings when they are away.

Simple Installation

The smart room sensors come with two AAA batteries and are mounted to the wall with a removable strip. The [T9 Smart Thermostat](#) can configure itself with wire-sensing technology, which makes do-it-yourself installation very simple. It features a C-wire adapter, making it compatible with most homes. The T10 Pro Smart Thermostat is installed professionally as it offers humidity and ventilation controls.

Pricing

The Honeywell Home [T9 Smart Thermostat](#) and one sensor are available at major retailers nationwide and at [Honeywellhome.com](https://www.honeywellhome.com) (MSRP \$199.99). The Honeywell Home T10 Pro Smart Thermostat will be available via professional heating and cooling contractors. Additional smart room sensors can be purchased in a package of two for \$79.99.
