

HOME MAINTENANCE QUESTIONS? **ASK A PROFESSIONAL.**

Seek the advice of a pro to help keep your home safe, save money, and extend the life of your home's four critical networks.

AIR

HOW CAN I IMPROVE MY HOME'S AIR QUALITY?

Run an indoor air quality scan to check CO, dust and humidity levels in the air. Run seasonal furnace and AC tune-ups to keep them operating efficiently throughout the year.

SECURITY

HOW CAN I BETTER PROTECT MY HOME FROM FIRE OR INTRUSION?

Identify your potential target areas and lower your risk of intrusion using connected security cameras. To protect from fire, install connected smoke/CO detectors that feature professional monitoring.

ENERGY

HOW CAN I MINIMIZE THE CARBON FOOTPRINT OF MY HOME?

Maintain your major appliances seasonally so they aren't drawing more power than necessary. Also, by installing a smart thermostat and using home/away settings, you can save energy when you're not there.

WATER

HOW CAN I PROTECT MY HOME FROM LEAKS AND UNINTENDED WATER USE?

Install a whole home water controller and leak detector and ensure you flush your water heater annually to remove deposits and keep it running properly.
